

Excretory & Nervous System – Page 416

Source: Lucent's General Knowledge – Biology

Biology: Excretory System, Nervous System & Brain

50 Questions • 30 Minutes

Instructions:

- Each question has 4 options (A, B, C, D).
- The correct answer is shown on the right side of each question.
- Detailed explanations with textbook page references are at the end.

Questions

Q1. Lymphocytes present in lymph help to prevent the body from diseases by:

- A. Producing hormones
- B. Killing harmful bacteria and other toxic foreign bodies
- C. Producing glucose
- D. Absorbing nutrients

Ans: B

Q2. The node found in lymph vessels is called:

- A. Alveoli
- B. Lymph node
- C. Nephron
- D. Neuron

Ans: B

Q3. Lymph helps in:

- A. Digestion only
- B. Healing the wounds
- C. Producing hormones
- D. Blood clotting only

Ans: B

Q4. Excretion is the removal of:

- A. Digested food
- B. Waste products formed during metabolism
- C. Blood
- D. Oxygen

Ans: B

Q5. The excretory organs of human are:

- A. Only kidneys
- B. Kidneys, Skin, Liver and Lungs
- C. Only liver
- D. Only skin

Ans: B

Q6. The main excretory organ in human is:

- A. Skin
- B. Kidneys
- C. Liver
- D. Lungs

Ans: B

Q7. Each kidney is made up of approximately how many kidney ducts (nephrons)?

- A. 50,000
- B. 1,30,00,000 (13 lakh)
- C. 1000
- D. 100

Ans: B

Q8. Nephron is the structural and functional unit of: A. Liver B. Kidney C. Heart D. Lung	Ans: B
Q9. The cup-like structure in every nephron is called: A. Glomerulus B. Bowman's capsule C. Loop of Henle D. Collecting duct	Ans: B
Q10. Glomerulus is made up of: A. Muscle fibers B. Thin blood vessels found in Bowman's capsule C. Nerve fibers D. Bone cells	Ans: B
Q11. The process of filtration of liquid into cavity of Bowman's capsule is called: A. Absorption B. Ultra filtration C. Osmosis D. Diffusion	Ans: B
Q12. The main function of the kidneys is: A. Producing hormones B. Purification of blood plasma by excreting nitrogenous waste through urination C. Producing enzymes D. Digesting food	Ans: B
Q13. In kidneys, average blood filtrated per minute is: A. 50 mL B. 125 mL C. 250 mL D. 500 mL	Ans: B
Q14. How many litres of urine is formed daily? A. 0.5 litres B. 1.45 litres C. 5 litres D. 10 litres	Ans: B
Q15. Urine is an aqueous solution in which water constitutes: A. 80% B. 95% C. 70% D. 99%	Ans: B

Q16. The colour of urine is light yellow due to presence of: A. Bilirubin B. Urochromes (formed by dissociation of haemoglobin) C. Melanin D. Carotene	Ans: B
Q17. The correct sequence of urine flow in human body is: A. Ureter → Kidney → Bladder → Urethra B. Kidney → Ureter → Urinary bladder → Urethra C. Urethra → Bladder → Ureter → Kidney D. Bladder → Kidney → Ureter → Urethra	Ans: B
Q18. Urine pH is: A. 7 (neutral) B. 6 (acidic) C. 8 (alkaline) D. 5 (very acidic)	Ans: B
Q19. Kidney stones are made up of: A. Calcium carbonate B. Calcium oxalate C. Calcium chloride D. Sodium chloride	Ans: B
Q20. Excretory parts of Arthropods are: A. Nephridia B. Malpighian tubules C. Flame cells D. Kidneys	Ans: B
Q21. Excretory parts of Flat worm are: A. Kidneys B. Flame cells C. Malpighian tubules D. Nephridia	Ans: B
Q22. Excretory parts of Animals of Annelida Phylum are: A. Flame cells B. Nephridia C. Malpighian tubules D. Kidneys	Ans: B
Q23. Hemodialysis is the process of: A. Blood transfusion B. Removal of excess urea from blood using artificial kidney C. Blood typing D. Blood clotting	Ans: B

Q24. Excretory parts of Curstaceans (crabs, lobsters) are: A. Flame cells B. Antennal gland C. Nephridia D. Kidneys	Ans: B
Q25. Liver cells play the main role in excretion by converting amino acids and ammonia into: A. Glucose B. Urea C. Fat D. Protein	Ans: B
Q26. Lungs excrete which gaseous substances? A. Oxygen only B. Carbon dioxide and water vapour C. Nitrogen only D. Hydrogen only	Ans: B
Q27. Nervous System of human is divided into how many parts? A. 2 B. 3 – Central, Peripheral, Autonomic C. 4 D. 1	Ans: B
Q28. Central Nervous System is made up of: A. Only Brain B. Brain and Spinal Cord C. Only Spinal Cord D. Only Nerves	Ans: B
Q29. Brain is covered by a membrane called: A. Peritoneum B. Meninges C. Pericardium D. Pleura	Ans: B
Q30. Brain is situated in a bony box called: A. Vertebra B. Cranium C. Sternum D. Pelvis	Ans: B

Q31. Brain is divided into three parts: A. Left, Right, Middle B. Fore brain, Mid brain, Hind brain C. Upper, Lower, Middle D. Inner, Outer, Core	Ans: B
Q32. The weight of the human brain is: A. 500 grams B. 1336 grams C. 2000 grams D. 750 grams	Ans: B
Q33. Fore brain includes: A. Cerebellum and Pons B. Cerebrum, Thalamus and Hypothalamus C. Medulla only D. Corpora quadrigemina	Ans: B
Q34. Cerebrum is the centre of: A. Only movement B. Wisdom, will power, memory, knowledge and thinking C. Only hearing D. Only vision	Ans: B
Q35. Cerebrum is the largest part of the brain and is responsible for: A. Only balance B. Analysis, coordination of muscular movements from sense organs C. Only breathing D. Only heartbeat	Ans: B
Q36. The function of Thalamus is: A. Memory B. It is the centre of feeling pain, cold and heat C. Balance D. Breathing	Ans: B
Q37. Hind brain consists of: A. Cerebrum and Thalamus B. Cerebellum, Pons and Medulla C. Only Cerebrum D. Only Thalamus	Ans: B
Q38. Outer part of kidney is called: A. Medulla B. Cortex C. Pelvis D. Capsule	Ans: B

Q39. Which arteriole carries blood TO the glomerulus? A. Efferent arteriole B. Afferent arteriole C. Renal vein D. Collecting duct	Ans: B
Q40. Blood supply to the kidneys compared to other organs is: A. Very less B. In large quantity C. Same D. Zero	Ans: B
Q41. Unicellular animals excrete by: A. Kidneys B. Diffusion through general body surface and contractile vacuole C. Flame cells D. Malpighian tubules	Ans: B
Q42. Animals of Porifera Phylum excrete by: A. Kidneys B. General body surface C. Nephridia D. Flame cells	Ans: B
Q43. Coelenterates excrete: A. By kidneys B. Directly by cells C. By nephridia D. By Malpighian tubules	Ans: B
Q44. Mollusca excrete by: A. Kidneys B. Urinary organ (kidney-like organ) C. Flame cells D. Antennal gland	Ans: B
Q45. Vertebrates mainly excrete by: A. Flame cells B. Kidneys C. Antennal gland D. Malpighian tubules	Ans: B
Q46. Oil gland and sweat glands found in skin are part of: A. Digestive system B. Excretory system (Skin) C. Respiratory system D. Nervous system	Ans: B

Q47. The excretion of some spices like garlic, onion happens through:

- A. Kidneys
- B. Lungs (as vapour)
- C. Skin
- D. Liver

Ans: B

Q48. Input and output nerves meet at:

- A. Heart
- B. Central nervous system
- C. Liver
- D. Kidneys

Ans: B

Q49. Mid brain contains:

- A. Cerebrum
- B. Corpora quadrigemina
- C. Cerebellum
- D. Medulla

Ans: B

Q50. Lymph helps in transportation of:

- A. Only oxygen
- B. Different materials like oxygen, protein, and nutrients to tissues
- C. Only carbon dioxide
- D. Only hormones

Ans: B

Answer Key & Explanations

Q1. Answer: B — Killing harmful bacteria and other toxic foreign bodies

Page 416: Lymphocytes in lymph prevent diseases by killing harmful bacteria and toxic foreign bodies.

Topic: Lymph

Q2. Answer: B — Lymph node

Page 416: The node found in lymph vessels is called lymph node. It works as a filter of microbes.

Topic: Lymph

Q3. Answer: B — Healing the wounds

Page 416: Lymph helps in healing the wounds.

Topic: Lymph

Q4. Answer: B — Waste products formed during metabolism

Page 416: Excretion is removal of waste products formed during metabolism from the body.

Topic: Excretory System

Q5. Answer: B — Kidneys, Skin, Liver and Lungs

Page 416: Excretory organs: 1. Kidneys, 2. Skin, 3. Liver, 4. Lungs.

Topic: Excretory System

Q6. Answer: B — Kidneys

Page 416: Kidneys are the main excretory organ in human and other mammals. Weight is 140 grams.

Topic: Excretory System

Q7. Answer: B — 1,30,00,000 (13 lakh)

Page 416: Each kidney is made up of approximately 1,30,00,000 kidney ducts called nephrons.

Topic: Excretory System

Q8. Answer: B — Kidney

Page 416: Nephron is the structural and functional unit of the kidney.

Topic: Excretory System

Q9. Answer: B — Bowman's capsule

Page 416: There is a cup-like structure in every nephron called Bowman's capsule.

Topic: Excretory System

Q10. Answer: B — Thin blood vessels found in Bowman's capsule

Page 416: Glomerulus is made up of thin blood vessels found in Bowman's capsule.

Topic: Excretory System

Q11. Answer: B — Ultra filtration

Page 416: Process of filtration of liquid into cavity of Bowman's capsule is called ultra filtration.

Topic: Excretory System

Q12. Answer: B — Purification of blood plasma by excreting nitrogenous waste through urination

Page 416: Main function of kidneys is purification of blood plasma, excreting unwanted nitrogenous waste substances through urination.

Topic: Excretory System

Q13. Answer: B — 125 mL

Page 416: In kidneys, average 125 mL per minute blood is filtrated, i.e., 180 litres per day.

Topic: Excretory System

Q14. Answer: B — 1.45 litres

Page 416: Out of 180 litres filtered, 1.45 litres urine is formed daily and remaining is absorbed back.

Topic: Excretory System

Q15. Answer: B — 95%

Page 416: Urine is an aqueous solution in which 95% is water. Other constituents include urea, uric acid, chloride, sodium, potassium, creatinine.

Topic: Excretory System

Q16. Answer: B — Urochromes (formed by dissociation of haemoglobin)

Page 416: Colour of urine is light yellow due to presence of urochromes, formed by dissociation of haemoglobin.

Topic: Excretory System

Q17. Answer: B — Kidney → Ureter → Urinary bladder → Urethra

Page 416: Correct sequence: Kidney → Ureter → Urinary bladder → Urethra.

Topic: Excretory System

Q18. Answer: B — 6 (acidic)

Page 416: Urine is acidic. Its pH value is 6.

Topic: Excretory System

Q19. Answer: B — Calcium oxalate

Page 416: The stone formed in kidneys is made up of calcium oxalate.

Topic: Excretory System

Q20. Answer: B — Malpighian tubules

Page 416: Arthropods excrete by Malpighian tubules.

Topic: Excretory System

Q21. Answer: B — Flame cells

Page 416: Flat worm excretory parts are flame cells.

Topic: Excretory System

Q22. Answer: B — Nephridia

Page 416: Annelida Phylum excretory parts are Nephridia.

Topic: Excretory System

Q23. Answer: B — Removal of excess urea from blood using artificial kidney

Page 416: Hemodialysis is removal of excess urea from the blood of patient using artificial kidney.

Topic: Excretory System

Q24. Answer: B — Antennal gland

Page 416: Crustaceans excretory parts are Antennal gland.

Topic: Excretory System

Q25. Answer: B — Urea

Page 416: Liver cells play main role in excretion by converting amino acids and ammonia of blood into urea.

Topic: Excretory System

Q26. Answer: B — Carbon dioxide and water vapour

Page 416: Lungs excrete carbon dioxide and water vapour.

Topic: Excretory System

Q27. Answer: B — 3 – Central, Peripheral, Autonomic

Page 416: Nervous System is divided into 3 parts: 1. CNS, 2. PNS, 3. Autonomic Nervous System.

Topic: Nervous System

Q28. Answer: B — Brain and Spinal Cord

Page 416: CNS of human is made up of two parts - Brain and Spinal Cord.

Topic: Nervous System

Q29. Answer: B — Meninges

Page 416: Brain is covered by membrane called meninges. It is situated in a bony box called cranium.

Topic: Nervous System

Q30. Answer: B — Cranium

Page 416: Brain is situated in a bony box called cranium which protects it from external injury.

Topic: Nervous System

Q31. Answer: B — Fore brain, Mid brain, Hind brain

Page 416: Brain is divided into Fore brain, Mid brain, and Hind brain.

Topic: Nervous System

Q32. Answer: B — 1336 grams

Page 416: Weight of the brain of human is 1336 grams.

Topic: Nervous System

Q33. Answer: B — Cerebrum, Thalamus and Hypothalamus

Page 416: Fore brain includes Cerebrum, Thalamus and Hypothalamus.

Topic: Nervous System

Q34. Answer: B — Wisdom, will power, memory, knowledge and thinking

Page 416: Cerebrum is the most developed part of brain. Centre of wisdom, will power, movements, memory, knowledge and thinking.

Topic: Nervous System

Q35. Answer: B — Analysis, coordination of muscular movements from sense organs

Page 416: Cerebrum is the largest part. It analyses and coordinates muscular movements received from sense organs.

Topic: Nervous System

Q36. Answer: B — It is the centre of feeling pain, cold and heat

Page 416: Thalamus is the centre of feeling pain, cold and heat.

Topic: Nervous System

Q37. Answer: B — Cerebellum, Pons and Medulla

Page 416: Hind brain consists of Cerebellum, Pons and Medulla.

Topic: Nervous System

Q38. Answer: B — Cortex

Page 416: Outer part is called cortex and inner part is called medulla.

Topic: Excretory System

Q39. Answer: B — Afferent arteriole

Page 416: Afferent arteriole carries blood to the glomerulus. Efferent arteriole takes blood out.

Topic: Excretory System

Q40. Answer: B — In large quantity

Page 416: Supply of blood to kidneys takes place in large quantity in comparison to other organs.

Topic: Excretory System

Q41. Answer: B — Diffusion through general body surface and contractile vacuole

Page 416: Unicellular animals excrete by diffusion through general body surface and contractile vacuole.

Topic: Excretory System

Q42. Answer: B — General body surface

Page 416: Porifera Phylum animals excrete by general body surface.

Topic: Excretory System

Q43. Answer: B — Directly by cells

Page 416: Coelenterates excrete directly by cells.

Topic: Excretory System

Q44. Answer: B — Urinary organ (kidney-like organ)

Page 416: Mollusca excrete by urinary organ (by urinary organ/kidney-like structure).

Topic: Excretory System

Q45. Answer: B — Kidneys

Page 416: Vertebrates mainly excrete by kidneys.

Topic: Excretory System

Q46. Answer: B — Excretory system (Skin)

Page 416: Skin has oil glands and sweat glands. Skin is the second excretory organ.

Topic: Excretory System

Q47. Answer: B — Lungs (as vapour)

Page 416: Lungs excrete vapour component of some substances like garlic, onion and some spices.

Topic: Excretory System

Q48. Answer: B — Central nervous system

Page 416: Input and output nerves meet at central nervous system.

Topic: Nervous System

Q49. Answer: B — Corpora quadrigemina

Page 416: Mid brain contains Corpora quadrigemina.

Topic: Nervous System

Q50. Answer: B — Different materials like oxygen, protein, and nutrients to tissues

Page 416: Lymph helps in transportation of different materials like oxygen, protein and other nutrients to the tissues.

Topic: Lymph
